EASTERN MEDITERRANEAN CLIMATE AND HEALTH RESPONDERS COURSE

February 11 - April 29, 2026
Wednesdays, 4:00-5:30pm Cairo Time

[REGISTER](#)

BACKGROUND

Across the Eastern Mediterranean Region, climate change is already impacting health—creating new challenges and exacerbating existing inequities. Current and future health professionals in the region—from clinicians and community health workers to public health officials and policymakers—require additional skills and knowledge to advance a coordinated, comprehensive, and culturally-informed response to these impacts. Over 11 sessions, the Eastern Mediterranean Climate and Health Responders Course will address this urgent need by connecting students and health professionals with regional experts, innovative research, and evidence-backed solutions. **All health professionals interested in climate change and health are welcome to join, we look forward to seeing you there!**
